## THIRD PROFESSIONAL MBBS, SEMESTER-VII EXAMINATION YEAR 2013

**EYE**  
(SEQs)

Exudate  
purulent  
Mucop

**Time Allowed: One Hour**

**Date: 26-04-2013**

**Maximum Marks: 30**

**NOTE:**

- Attempt any **SIX** questions.
- All questions carry equal marks.

Q.1. An 18 years old girl has crusty lids and red eyes and complains of sand in her eyes. On detaching the crust from lid margin bleeding follows with edema of lids. What is your diagnosis and how will you manage? → *Ulcers*

Q.2. A 40 years old woman complains of watery, itchy, swollen red eyes with muco-purulent discharge. What important conditions can create this problem? How can you manage? *Bacterial conjunctivitis*

Q.3. A 47 years old lady complains of foreign body sensation in right eye. On opening the lids she has photophobia with pain and lacrimation. On examination the cornea shows ulcer formation on the surface. How will you manage left eye mature cataract of the patient? ←

Q.4. A 67 years old man is referred to you complaining of reduced vision. The best corrected vision is R 6/18, L 6/60. Your findings include bilateral white pupils. Enumerate causes of leucocoria. How will you manage left eye (mature cataract of the patient?)

Q.5. A 67 years old farmer has noticed reduced vision in his right eye for 6 months, but over the last week it has become painful and red. On examination, acuities are perception of light in right and 6/9 in left, with the right eye very injected. There was significant corneal edema in the right eye with a dilated non-reactive pupil and shallow anterior chamber. The IOP was 52mmHg in the right eye. What is your diagnosis and how the patient should be managed medically? *Acute glaucoma*

Q.6. A 30 years old woman comes to see you at your clinic presenting with right eye anterior uveitis.

- How will you classify uveitis?
- What clinical findings she may have in her affected eye?
- What is the management of anterior uveitis?

Q.7. A 50 year old woman presents with an isolated left eye upper lid drooping. Enumerate the causes of upper lid drooping. What can be the complication if such a clinical condition develops within first two years after birth?

Q.8. Define hypermetropia. What are the types of hypermetropia and how will you manage axial hypermetropia?
